The Renishaw XM-60 and XM-600 multi-axis calibrator uses wireless communication to transmit data between the Launch Unit and the Receiver. In many territories devices which use the radio frequencies used by wireless communication are exempt from many of the normal regulations covering radio devices. In other territories the level of regulation varies. The table above indicates the relevant standards or licensing authority that XM-60 and XM-600 complies with for indicated territories and the corresponding registration number, where applicable.
